

RECONCILING THE SCIENCE AND ECONOMICS OF CLIMATE CHANGE

The Social Cost of Carbon

by Eban Goodstein

Bard Center for Environmental Policy

Scientific assessments of climate change consequences forecast massive physical changes to the planet's biophysical systems, and by extension, to human economic and social systems as well. However, some economists - while accepting the basic science of climate change - have suggested rather modest mitigation policies. This talk will explore these differences in perspective.

Friday, February 22

1:00 - 2:30 PM

Humanities Building, Room 150

University of Colorado Boulder

Hosted by the International Collective
on Environment, Culture and Politics
